

LANET: Language Network

Feature Expansion & Development Document

AI-Powered Ethiopian Language Learning Platform

Project Overview

This document outlines the new feature expansion plan for LANET, a modern AI-powered Ethiopian language learning platform. The features focus on improving conversation skills, listening, reading, writing, social engagement, AI innovation, and progress analytics. These enhancements aim to provide learners with a comprehensive, interactive, and personalized language learning experience.

1. Conversation Practice

- Role-play scenarios (ordering food, job interviews, travel, daily conversations).
- Voice-based conversations .
- Pronunciation feedback.

2. Listening Skills

- Audio lessons organized by proficiency level.
- Interactive listening quizzes.

3. Reading Features

- Short stories with clickable vocabulary definitions.
- News articles adapted by language level.
- Dual-language reading mode (native and target language).

4. Writing Features

- Sentence construction exercises.
- Open-ended writing prompts.
- Personalized vocabulary lists.
- Weakness tracking dashboard.

5. Social & Community Features

- Community discussion boards.
- Correction exchange between learners.
- Group challenges and competitions.

6. Advanced / Innovative Features

- Object labeling.
- Real-world vocabulary detection.

7. Progress & Analytics

- Weekly performance reports.
- Skill-based progress tracking (Listening, Speaking, Reading, Writing).
- Personalized improvement recommendations.
- Learning streak tracking.

Project Impact

These new features will transform LANET into a comprehensive language learning ecosystem. The platform will support Ethiopian languages, improve communication, preserve culture, and provide modern AI-powered education tools.
